

*The Active Travel Plan* aims to increase walking and bicycle riding as part of everyday transport within the Strathfield LGA. The plan outlines the directing of investment towards infrastructure and behavioural change programs, encouraging the community to walk and cycle more.

## Active Travel Plan Goals

- Integrating walking and bicycle riding into the transport system as a legitimate form of transport, encouraging more frequent use;
- Providing appropriate walking and bicycle riding facilities, enhancing accessibility and mobility;
- Improvements to address clusters and patterns of pedestrian and bicycle rider accidents, to address safety issues; and
- Active transport routes that complement 'Safer Routes to Schools' projects and Local Area Traffic Management schemes.

## Key Outcomes

Proposed walking and bicycle riding networks have been developed as part of the Active Travel Plan to address safety and connectivity concerns. These networks were identified through a review of pedestrian and bicycle crash data, consultation with the community and key stakeholders, and site investigations.
